Waterborne paint tub

To meet our customer expectations, Stinson designed a specific tub RZ-STINSON-TUB1 for waterborne paint. This tub reduces the exposure of the paint to air, the potential of spilling and facilitates the loading.

It is compatible to all Graco LineLap by opening the lid. If you frequently change color, you would use the opening in the lid, making it easier to change the tub. Every tub is supplied with two caps to keep paint from air exposure while in storage and one cap with a hole to insert the tube.

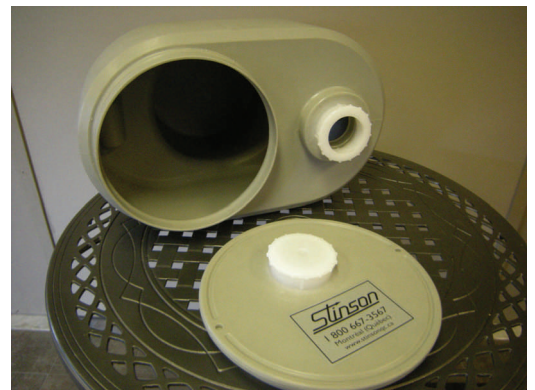

Équipements Stinson, the reference in Road Safety believes that this tub will improve your operation and reduce your cleaning costs.

RZ-STINSON-TUB1 tub in stock and ready to ship

It is compatible to all Graco LineLap series IV machines, except the 200HS which requires a small modification. The capacity of the tub is 12 gallons, taking into consideration the weight of waterborne paint.

No more spilling. With the two openings you have the choice where you insert the tube. If you always use the same color you would choose the opening on the side. Allowing you to easily load the paint
